The Campus as a Living Lab Internship Program is your opportunity to learn about the sustainability of UCI’s physical operations and systems through applied research and exposure to a range of projects.

Successful applicants will enroll as interns in BIO SCI 197: “Campus Living Lab” with Dr. Travis Huxman. They will meet in class 1 hour per week, and earn either BIO SCI 199 or BIO SCI 197 credit by participation in sustainability-focused research projects. As part of this program, interns will work directly with campus faculty and staff in select offices, departments, and facilities. Interns who participate in the program for more than one year will have the opportunity to develop their own independent research project.

**Program Details**

**Duration:** Fall, Winter, Spring Quarters

**Who Can Apply:** UCI Undergraduates

**Prerequisite:** Bio Sci 194S

**Required:** Two units per quarter (three - four hours/week per unit)
